DETAILED ACTION

1. This action is responsive to the amendments filed May 28, 2009. In the instant amendment, claims 1, 18, and 30 have been amended.
2. The object to claims 1 and 18 is withdrawn in view of Applicant's amendments.
3. Claims 1-11, 13-28, and 30-34 have been examined, and all remained pending claims are allowed (renumbered 1-32).

Examiner's Amendments

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
5. Authorization for this examiner's amendment was given in a telephone interview with Mr. Scheer, Registration No. 47,059, on August 12th, 2009, to obviate minor informality, re-define the claim language, and put the claims in condition for allowance.

IN THE CLAIMS: Claims 1 and 18 have been amended as follows:

Claim 1 (Currently Amended),

Line 29, after "method", insert , wherein said dispatcher includes: i) a dictionary that is used to correlate said first and third methods to said plug-in module, and, ii) a plug-in pattern which lists said first and third methods along with additional methods that said dispatcher dispatches to said plug-in module.

Claim 18 (Currently Amended),

Line 30, after "said third", delete [[method]], and insert method.

-O-O-O-

Examiner's Statement of Reasons for Allowance

6. As Applicants pointed out in the Remarks, the prior art of record (Boykin, APA, and Ward) do not disclose and/or fairly suggest at least claimed limitations in independent claim 1 "...a) invoking a second method from a first method instrumented with bytecode, said first method belonging to said classfile, said invoking comprising providing an identification of said first method and said classfile, said second method belonging to a dispatcher, said classfile having previously registered with said dispatcher, said dispatcher incapable of injecting bytecode into said classfile; b) said dispatcher performing said second method to identify a plug-in module for said first method based upon said identification, said plug-in module to implement a handler method, said dispatcher returning to said first method an identifier of said plug-in module, said identifier not being a boolean value representative of one of only two possible states;... f) invoking said second method from said third method, said invoking including providing an identification of said third method and a second classfile that said third method is a part of, said second classfile having been loaded and said third method instrumented with bytecode at least by the completion of e) above, said second classfile having previously registered with said dispatcher, said dispatcher incapable of injecting bytecode into said second classfile;... wherein said dispatcher includes: i) a dictionary that is used to correlate said first and third methods to said plug-in module, and, ii) a plug-in pattern which lists said first and third methods along with additional methods that said dispatcher dispatches to said plug-in module " and similar in such manners recited in other independent claim 18 (Remarks, pp. 10-12).

These claimed limitations are not present in the prior art of record and would not have been obvious, thus all pending claims are allowed.
